Possibility to book extra lessons (please inform us when booking)

WHAT IS THE WORKSHOP FOR?

Structured and interactive session designed to create an environment for meaningful understanding of horse care and welfare.

The first 1-hour workshop is an essential course of **FIRST AID PROCEDURES**.

You will:

- Gain a basic overview of what's normal to recognize when there is a problem
 - Common problems you will face
 - Learn how to administer first aid
- Learn essential help to provide until a professional arrives

The second 1-hour workshop is an **introduction to horse behaviour**. Understanding horse behaviour is a must to be able to identify horse behaviour problems which are a common complaint of horse owners.

The third 1-hour workshop is about **equine conformation, biomechanics and beyond**. Emphasis on functional conformation-recognizing that while a horse may not have perfect conformation, it must be fit for its intended purpose. This talk intends to equip the participants to evaluate not just the ideal conformation, but how specific conformational traits can influence a horse's risk of injury, areas prone to tension and overall biomechanics.

After every presentation, Francina will answer all the questions the participants may have.

THE SPEAKER

Francina Barceló Oliver is an equine specialized veterinary surgeon. She graduated from the University of Madrid (Alfonso X el Sabio), Spain, in 2012 and moved to Ireland to complete an internship in neonatal intensive care. She subsequently completed an rotational equine internship in the University of Liverpool before moving to Scotland to start an equine surgery residency programme with a combined masters degree in July of 2015. The focus of her masters thesis was the diagnosis and progression of recurrent laryngeal neuropathy.

From 2020 she moved back home to Mallorca where she started her work as veterinary surgeon in the island and on the family business
